

Emanuele Mezzi

PhD Candidate in AI and Threat Intelligence

I am a curious, professional, and creative AI researcher, passionate about Threat Intelligence, Risk Analysis, and Remote Sensing

WORK EXPERIENCE

PhD Candidate

Vrije Universiteit Amsterdam - TNO

09/2023 - Present

Collaboration between [VU Amsterdam](#) and [TNO](#)

Areas of research

- Large Language Models (LLMs), Risk Analysis and Assessment, Cyber Threat Intelligence, Remote Sensing, Uncertainty Quantification, Trustworthy AI.

AI Lead Researcher & Co-founder

Ethikon AI

09/2024 - Present

[Ethikon AI](#) is a non-governmental organization focused on promoting the ethical use of artificial intelligence.

Description

- With the research team, I develop methods to make AI explainable and transparent.
- Our research resulted in the publication of the article [Who Owns the Output? Bridging Law and Technology in LLMs Attribution](#)

EDUCATION

MSc in Information Studies: Data Science

University of Amsterdam

09/2022 - 08/2023

GPA: 8.15/10 - With Honours

BSc in Computer Science

University of Salerno

08/2018 - 09/2021

GPA: 29.45/30 - With Honours

TECHNICAL SKILLS

Artificial Intelligence

Large Language Models - Deep Learning - Neuro-symbolic AI - Multi-agent systems - Trustworthy AI

AI Frameworks & Libraries

PyTorch - TensorFlow - scikit-learn - Keras

Programming Languages

Python - Java - C

Domain knowledge

Cyber Threat Intelligence - Risk analysis - Remote sensing

SOFT SKILLS

Empathy

Leadership

Public Speaking

Resilience

Adaptability

PUBLICATIONS

Conference paper

Large Language Models Are Unreliable for Cyber Threat Intelligence

Author(s)

Emanuele Mezzi, Fabio Massacci, Katja Tuma

08/2025

Availability, Reliability and Security (ARES 2025)

This paper introduces a framework for evaluating LLMs in Cyber Threat Intelligence, assessing their performance, the effects of non-determinism, and overall reliability.

Journal paper

Risks of ignoring uncertainty propagation in AI-augmented security pipelines

Author(s)

Emanuele Mezzi, Fabio Massacci, Katja Tuma

06/2025

Risk Analysis

This paper introduces a formal framework for simulating error and uncertainty propagation in security pipelines composed of multiple AI models, demonstrating the necessity of accounting for such propagation in multi-model systems.

PROJECTS

RUNE: Neurosymbolic Inference for Remote Sensing text-to-image retrieval (09/2024 - Present)

- Developed a methodology that integrates LLMs with neuro-symbolic inference to enable text-to-image retrieval in remote sensing. The work is currently under submission to [ACM TSAS](#).

HONOR AWARDS

Student Merit - Travel Award (09/2025 - Present)

Society of Risk Analysis

- Award based on the quality of the research presented at the Annual Meeting of the Society of Risk Analysis.
